

Ramamohan S

Lead DevOps Engineer

☎ +91-9502594914 | ✉ ramsirigi3@gmail.com

Objective

Automation Results-driven DevOps leader with 11+ years of experience in architecting and optimizing CI/CD pipelines and cloud-native infrastructure across multi-cloud environments (Azure, AWS & GCP). Proven expertise in Kubernetes cluster administration, Infrastructure as Code (Terraform), and containerized deployments, enabling faster release cycles and enhanced platform reliability. Adept at delivering automated, scalable solutions aligned with business objectives while fostering innovation through modern DevOps practices. Passionate about advancing Kubernetes mastery and leveraging AI-driven development tools to transform workflows.

Technical Skills

GCP, Azure, AWS, DevOps, Kubernetes, Terraform, Ansible, CICD(Azure DevOps, Jenkins, GitHub Actions, ArgoCD), AI/ML Ops, Migration, Site Reliability Engineer, Git, GitHub, Azure Repos, Bash, Python, Datadog, Prometheus, Grafana, ELK, BigPanda, PagerDuty, Hashicorp Vault, Fortify, Jira, ServiceNow

Experience

Lead DevOps Engineer, UST Global - Bangalore,

July 2022 – Present

Responsibilities:

- Leveraged 11+ years of experience to architect and deploy scalable **AWS**, **GCP** and **GCP** and Azure solutions, optimizing operational efficiency and multi-cloud performance.
- Certified **Azure Solutions Architect**, **GCP Professional Cloud Architect** and **DevOps Engineer Expert** with advanced proficiency in **Terraform-driven** automation and DevOps best practices.
- Designed, implemented, and operated highly available Kubernetes platforms (EKS, multi-region clusters) ensuring resilience, scalability, and adherence to defined SLOs, SLIs, and error budgets.
- Led incident response, root cause analysis, and blameless postmortems; developed automation to reduce MTTR and improve reliability across distributed systems.
- Architected and managed centralized observability platforms for metrics, logs, traces, and alerting using Prometheus, Alertmanager, Grafana, OpenTelemetry, Datadog, Splunk, and Cribl.
- Established actionable alerting standards and observability best practices, enabling engineering teams to adopt Observability-Driven Development.
- Built and managed AWS cloud infrastructure with Terraform; optimized scalability, performance, and cost efficiency across AWS and GCP environments.
- Operated Kubernetes clusters with Helm, ArgoCD, and Argo Rollout; deployed and managed containerized workloads using Docker and containerd.
- Developed Python-based automation and tooling for observability, incident response, SLO reporting, and operational workflows; integrated CI/CD pipelines with reliability checks.
- Defined and enforced monitoring, alerting, and observability standards to ensure infrastructure reliability and performance across large-scale distributed systems.
- Provided technical leadership and mentorship to engineering teams; influenced architecture decisions and fostered collaboration across DevOps, SRE, and development teams.
- Implemented service mesh (Istio) and API Gateway (Kong) solutions to enhance reliability, traffic management, and security in Kubernetes environments.

Senior Associate Consultant, Infosys Limited - Hyderabad,

March 2019 – July 2022

Responsibilities:

- Developed clean, maintainable Python services and automation tooling to streamline infrastructure operations and improve developer productivity.

- Designed, migrated, and operated production Kubernetes clusters (EKS/GKE), leading upgrades, workload migrations, autoscaling, and capacity planning.
- Implemented safe deployment strategies including rolling, canary, and blue/green releases to minimize downtime and risk.
- Managed Infrastructure as Code (Terraform) fully version-controlled, enabling repeatable and auditable multi-cloud deployments.
- Operated multi-environment (dev/stage/prod) and multi-region setups across AWS and GCP, ensuring high availability and scalability.
- Built and maintained CI/CD pipelines for large monorepos, supporting deployments for web applications, background workers, ETL, and batch pipelines.
- Designed and maintained observability and telemetry systems using Prometheus, Grafana, OpenTelemetry, and distributed tracing for metrics, logs, and traces.

Senior Project Engineer, Wipro Limited - Bangalore,

Nov 2017 – Feb 2019

Responsibilities:

- Automated Azure infrastructure provisioning using Terraform, deploying AKS, VNets, NSGs, Load Balancers, and storage services across all environments.
- Built Azure DevOps CI/CD pipelines integrating Terraform and Helm, reducing manual effort by 80% and ensuring consistent AKS deployments.
- Designed and implemented scalable CI pipelines using GitHub Actions to automate source code compilation and artifact generation with Maven and Gradle.
- Configured Azure networking (VNet peering, private endpoints, App Gateway) to enable secure, high-performance microservices communication.
- Hardened AKS clusters with network policies, Azure RBAC, private endpoints, and Key Vault-based secret management.

Software Engineer, Intelli swift Software India Private Limited - Bangalore,

May 2017 – Aug 2017

Responsibilities:

- Implemented and administered CI/CD processes using Jenkins for automated build and deployment workflows.
- Managed Red Hat servers, including installation, configuration, backup, and recovery activities.
- Performed package installation/upgrade, patching, configuration management, version control, and security troubleshooting.
- Handled core Linux administration tasks such as user management, volume configuration, filesystem setup, service configuration, firewall management, and system monitoring.

Certifications

- 🏆 Certified Google Cloud Professional Architect
- 🏆 Certified Azure Solution Architect
- 🏆 Certified Azure DevOps Engineer Expert
- 🏆 Certified Microsoft GitHub Copilot
- 🏆 Certified Terraform Associate
- 🏆 Certified Azure Administrator
- 🏆 Certified Azure Security Engineer
- 🏆 Certified Azure AI Fundamentals

Education

BTECH, Electrical And Electronics Engineering

2010 – 2014

- JNTU Ananthapur.
